After starting the game, a strange system error appeared saying that steam_api.dll file is missing from my computer. Further reinstallation of PES 2017 did not help resolve the error. I found that many users had the same theme as the game. At first I thought the game was broken, but my friend successfully installed the game and was able play it on the same day and has the same installation of the computer and runs Windows 10 64 bit same as me. This prompted me to look for the solution steam_api.dll missing error in PES 2017. I have been looking for the solution in various forums and even wrote a ticket to the Origin support team, however, they replied that something was wrong on my computer and not related to them. After studying a bit for dll dll I found that these libraries are very important and contain various instructions for multiple programs. They also get overuse from multiple programs at once and are the number one target for various viruses and malware. So there are so many reasons why they could be destroyed and disappear from the system. Anyway, there are few solutions on how to fix steam_api.dll or any other dll error, but I'll go with the simplest, which helped me resolve steam_api.dll missing error in PES 2017. All you need to do is download steam_api.dll library from here: - choose which version of the operating system you are running and download the file. After that just install it by following the instructions you can find on the website. This is, steam_api.dll missing error in PES 2017 will be resolved.
